

AI Study Stress Coach

A one-minute check-in that turns student pressure into practical, personalised support.

n8n automation • AI guidance • email support

The problem: pressure builds before support arrives

Students often know they are overwhelmed but still do not know what to do first.

44%

of Dutch higher-education respondents reported depression or anxiety symptoms in the 2023 monitor.

Similar or higher levels were reported for emotional exhaustion, performance pressure, very high stress and loneliness.

Why this matters

When stress, poor sleep and several deadlines combine, the first barrier is often deciding on one manageable next step.

Our opportunity

Offer an immediate check-in and short guidance while clearly directing serious concerns toward human support.

Observed friction

01 TOO MANY SIGNALS

Stress, sleep, workload and deadlines all matter, but students have to interpret them alone.

02 GENERIC ADVICE

General study tips may be useful, but they do not respond to the student's current situation.

03 SUPPORT FEELS DISTANT

When a student feels overwhelmed, finding the right person or service can become another task.

Intended users and boundaries

PRIMARY USER

University and applied-science students who are experiencing study pressure and want a low-pressure way to pause and plan a next step.

WHO IT IS NOT FOR

The tool is not a therapist, diagnosis, crisis service or replacement for a study counsellor or healthcare professional.

CONDITIONS OF USE

The student must consent to sharing the check-in, provide a working email address, and understand that AI output can be imperfect.

The working n8n workflow

Seven connected nodes from form submission to email and a logged record.

The screenshot displays the n8n workflow editor interface. The top navigation bar shows the URL 'maxlopez.app.n8n.cloud' and a series of tabs for different workflows. The left sidebar contains navigation options: 'n8n Assistant', 'Overview', 'Personal', 'Shared with you', 'Templates', 'Help', and 'Settings'. The main workspace is divided into three panels: 'Executions', 'Editor', and 'Evaluations'. The 'Executions' panel on the left shows a list of recent runs, with the most recent one at 'Sep 16, 15:47:26' marked as 'Succeeded in 12.978s'. The 'Editor' panel in the center shows a workflow diagram with seven nodes connected in sequence: 'Student Check-In Form' (trigger), 'Clean Form Data' (manual), 'Assess Stress' (code), 'AI Well-Being Coach' (AI node), 'Compose Message' (manual), 'Email Student' (Gmail), and 'Log Check-In' (Google Sheets). The 'Evaluations' panel on the right shows the details of the selected execution, including the timestamp, status, duration, and size. The workflow is titled 'AI Study Stress Coach' and is set to 'Personal'.

7 connected nodes · automatic form trigger · AI node · Gmail + Google Sheets

User input takes less than a minute

The student answers seven short questions.

Name

Email

Stress level (1–10)

Hours of sleep

Workload (1–10)

Upcoming deadlines

How are you feeling today?

Why these inputs?

Together they provide context for the project score and AI-written response.

SEND CHECK-IN

How the decision works

Project scoring rule

Stress + $0.6 \times$ workload + $0.5 \times$ deadlines,
with a sleep adjustment.

Why AI is used

Rules classify the input; AI writes a warm
response that changes with the context.

Demo: submit a check-in

AI Study Stress Coach

Stress	8 / 10
Sleep	8 hours
Workload	8 / 10
Deadlines	8
Feeling	not good

SEND CHECK-IN

Demonstration input

This is a fictional test case. During the live demo, use “Demo Student” and an authorised test inbox.

No real student data.

Demo video

Result: practical guidance plus a clear boundary

Your study well-being check-in • High

Hi Demo Student,

Based on what you shared, your current stress level looks High.

1. Break the workload into smaller tasks.
2. Take a short break.
3. Plan priorities.
4. Connect with someone you trust.

General study tips only — not a diagnosis or replacement for professional help.

SDG 3 relevance and problem–solution fit

SPECIFIC SDG ISSUE

SDG 3 includes mental health and well-being. Study pressure, poor sleep and heavy workloads can make it harder for students to organise work and seek support.

HOW OUR TOOL RESPONDS

The coach creates a low-pressure check-in, gives a manageable next step, and encourages human support when the project rules flag higher concern.

Support well-being · reduce friction · keep humans in the loop

Why simpler alternatives fall short

Our value

One structured process combines context, a transparent rule, personalised wording, delivery and a record of the result.

A static study-tips page

Offers the same advice regardless of stress, sleep or workload.

A reminder app

Can notify the student, but does not interpret the check-in or explain a next step.

A free-form chatbot

May respond flexibly, but lacks the structured score, email delivery and logged outcome of this workflow.

Ethical risks and safeguards

WRONG OR GENERIC ADVICE

Risk: AI advice can be unsuitable.

Safeguard: Keep advice short, general and review prompts and test cases.

LATE OR FAILED WORKFLOW

Risk: The form may acknowledge submission before the email succeeds.

Safeguard: Monitor executions and make support options visible immediately.

SENSITIVE PERSONAL DATA

Risk: Names, emails and well-being responses are stored.

Safeguard: Minimise fields, restrict access and define a deletion period.

OVER-RELIANCE

Risk: A student may treat a category as a diagnosis.

Safeguard: Explain that the score is a project rule and direct serious concerns to people.

Thank you
