FocusQuest

AI for Good Hackathon 1 · SDG 4: Quality Education

Team: Lili Tárnok and Ana Talg Wolf

Built with: Lovable

Live app: https://map-my-study.lovable.app

What it does

FocusQuest is a study companion designed with students who experience ADHD-related focus difficulties or procrastination in mind. It turns a learner's own study material into manageable study quests. Students can upload a PDF or paste notes, select a focus session, take a structured break, and follow their progress.

The first version focuses on one complete study cycle:

1. Add study material.
2. Select a suggested topic or study quest.
3. Select the time and energy
4. Start a focus timer.
5. Take a short break.
6. Complete the session and advance towards the goal.

Who it is for

The app is intended for students who want more structure and motivation while studying. It may be especially helpful for learners who struggle with procrastination, distractions, time awareness, or returning to work after a break. FocusQuest does not diagnose or treat ADHD and does not replace professional or educational support.

SDG 4: Quality Education

FocusQuest supports SDG 4 by making independent learning more accessible and manageable. It gives students flexible session lengths, presents one study quest at a

time and avoids public comparison or punishment for missed days. The learner keeps control over the timer, resources and breaks.

How to run it

Open the live app using the link above. No installation is required. Add a PDF or paste study notes, select a focus length, and start the suggested quest. A sample set of notes is included for demonstrations and for cases where file processing is unavailable.

Responsible use and limitations

Uploaded files may contain private or copyrighted information, so the app explains how files are processed and avoids storing them permanently where possible. See `ETHICAL_REFLECTION.md` for the full reflection.

Team contributions

- Lili Tárnok: README, ethical reflection, and presentation slides.

- Ana Talg Wolf: Working product and demonstration.

- Lili + Ana: concept development, testing, and final review.

AI use

We used Lovable to generate and refine the web app and ChatGPT to develop the concept and support the written documentation. We reviewed the outputs, tested the product, and remain responsible for the submitted work.
